

# VORONOI · NESTED CONTROL ARCHITECTURE FOR AUTONOMOUS SCIENCE

A deterministic control plane, an episodic reasoning plane, a disposable execution plane and an append-only evidence plane — coupled only through durable state.

→ deterministic control event    → orchestrator session control    → execution + evidence write    - - - → read-only access to durable state    - - - → rigor gate · verdict · human decision    ● required    ⦿ advisory    ○ not applied

Coupling rule — every hand-off between planes is a durable write to the evidence plane; no agent addresses another directly. Control never reasons about science, reasoning never manages processes, and execution never persists anything outside git, Beads and .swarm/.
